

INFOTAINMENT SYSTEM

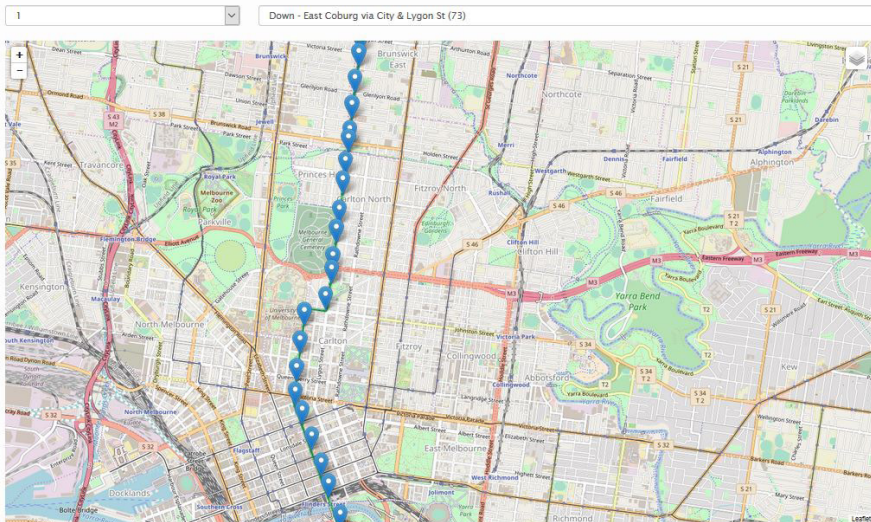

... passenger information, advertising, high definition media and GTFS live feed

THOREB is a market leader in providing customizable passenger information systems. High resolution color displays, available in different dimensions and for different installation options, show traffic information and commercials to passengers, based on the vehicles block and location. The system can be connected to the PA-System, which also enables automatic audible announcements.

Adjusted on the customer needs the name of the line and destination can be shown on the displays, together with a list of stops when driving, or a map indicating the current vehicle location with the route outlined. Commercials can also be shown on the same or separate displays. Moreover, certain commercials can be associated with stops or GPS positions.

When approaching a stop, a map can display further information about the surroundings. Information about other departures at the stop can be displayed together with estimated departure times. Text messages from the driver, or the traffic management can be displayed. With THOREB's Media Cloud, a web based application, it is easy to administrate the passenger's infotainment and the advertisements.

Advantages

- ✓ Customizable for different needs
- ✓ Information shown when needed
- ✓ Connection protection enabled
- ✓ Log of shown commercials
- ✓ Automatic audible announcements possible

Displays

- D 20/D22**
 - 20 or 22 inch display
 - Automatic brightness adjustment
 - Multiple unit compatibility
 - Seamless high-definition media playback
- D 29**
 - Extra-wide 29 inch display
 - Power over Ethernet (PoE) Connection
 - Automatic brightness adjustment
 - Multiple unit compatibility
 - Seamless high-definition media playback
- D 37**
 - Ultra-wide 37 inch display
 - 2 High-speed USB
 - Light sensor
 - Temperature sensor
 - Touch screen operation mode possible

Software Application

- Media Cloud**
 - Complete media management center
 - Create playlists
 - Automatic upload of media files and playlists to the infotainment displays in vehicles when published
 - Static, route and conditional media triggers
- WebDAISY**
 - Intelligent route design
 - Distance, location and time based activities
